EDUCATION

Northeastern University

Boston, MA

Bachelor of Science in Computer Science and Music Technology

Honors: magna cum laude, Dean's List

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C++, C, SQL, HTML, CSS, MATLAB

Frameworks: React, Django, Flask, PostgreSQL, SQLite, Bootstrap, JUCE

Tools & Technologies: Git, REST APIs, AWS (S3, CloudFront, Certificate Manager), Docker, Terraform, Snowflake, Claude, Microsoft Visual Studio, Heroku, Jira, Microsoft Azure, pgAdmin, Maven, Figma

EXPERIENCE

Lead Audio Engineer & International Communications

March 2025 – March 2026

Rhythmedia Inc.

Tokyo, Japan

- Developed a timecode sync VST using C++ and the JUCE framework, enabling consistent cross-DAW time alignment and improving studio workflow efficiency by 66%.
- Built an audio-to-SRT automation pipeline using OpenAI Whisper to auto-generate subtitles, streamlining the post-production subtitling workflow.
- Researched and evaluated multiple AI-assisted solutions to streamline post-production tasks, prototyping developer-facing tooling to support the creative team.

Site Reliability Engineer

February 2022 – July 2022

State Street Corporation

Boston, MA

- Built a client web app prototype with a team of four, improving navigation speed and minimizing click expenditure by 75%.
- Diagnosed and resolved account-level transactional lock errors in Snowflake that the team could not previously identify, and automated their detection to reduce manual operational effort.
- Cooperated with operations teams to mitigate failure patterns, reduce downtime, and increase performance by 200%.

PROJECTS

Lyrical Miracle | *JavaScript, Cloudflare Pages, REST API, D1/SQLite, Google OAuth*

March 2026 – Present

- Designed and deployed a full-stack lyric-writing tool with real-time phonetic analysis identifying six rhyme types using the CMU Pronouncing Dictionary.
- Built a REST API with full CRUD on Cloudflare Pages Functions and D1 (SQLite), secured with Google OAuth and HTTP-only session cookies for persistent storage across devices.

kon.ac Website | *Python, Django, PostgreSQL, AWS, Docker, Terraform*

December 2023 – Present

- Built and deployed a Django and PostgreSQL web application on AWS, containerized with Docker and provisioned with Terraform for reproducible cloud deployments.
- Implemented an email subscriber system with IP-based rate limiting (max 5 requests/hour) and CloudFront-derived geolocation for subscriber analytics.

taoseto.com | *JavaScript, HTML, CSS, Bootstrap, React, AWS*

December 2024 – Present

- Developed a full-stack, responsive single-page application (SPA) using React and JavaScript to showcase professional experience and projects.
- Reduced initial load time by approximately 40% with react-router-dom client-side routing and lazy loading, served globally via AWS CloudFront and S3 over HTTPS.

Valolytics | *Python, selectolax, requests, Git*

December 2023 – June 2025

- Built a VALORANT match analysis tool with an ELO rating engine using K-factor decay and map-specific adjustments, improving the precision of team ratings by 250%.
- Aggregated team statistics such as total maps played, win rates, and ELOs to improve data accessibility.
